

**Krämer & Partner Planungsgesellschaft mbH**  
Construction Planning, Installation Planning  
(Heating, Ventilation, Plumbing, Electricity), Project Management,  
Hospital Planning, Planning of Industrial Plants

We are a medium-sized planning company who for many years has been successfully engaged in the integrated general planning of ambitious projects in the public as well as industrial sectors.

In our service-oriented company we not only plan entire large-scale projects but also oversee their execution.

### **Integrated General Planning is our Company Philosophy**

The way we understand general planning is to bring together a specific number of specialized planners depending on the project requirements (Construction Engineers, Architects, Engineers specializing in the various installation fields as well as other specialists) who work together in a totally customer-oriented team to realize the construction project as specified.

Our high-quality planning work as well as the ability to stay within cost and time frames and to handle tips and critical reviews in a responsible manner guarantees long-term competitiveness and customer satisfaction.

We work according to the European Quality Standard for the Service Sector as per DIN EN ISO 9001:2000, which is an important guideline to maximize our customers' benefits.

Just as life, construction work must be laid out and planned to be rewarding. Based on the customer's specifications a project profile is created with a large number of companies and specialists involved in its implementation.

It's the responsibility and the aim of Krämer & Partner Planungsgesellschaft mbH to coordinate the activities of all parties involved in order to successfully achieve the stipulated results.

In close cooperation with municipalities as well as the public and private sectors we realize projects in the residential, public, commercial and industrial sectors as well as outside facilities. We also do the planning for the restructuring of whole towns and villages in addition to heating, ventilation, air conditioning, plumbing, electricity and environmental engineering.

Our core competence is the planning of hospitals. We apply an integrated and successful type of hospital architecture starting from the target planning up to the commissioning of complex hospital facilities on a "ready-for-occupancy" basis.

Turnover 2003: Euro 2.2 Mio.; Employees: 34

Performance: general planning, hospital planning, architecture, urban planning, supply engineering, planning of industrial plants, project management
