international
Landscape Architecture of the 21st century
Prof. Bott | Diener | Ratayski

The **LA²¹** project is a cooperation between two high-performance partners. From the joint project-orientated work of the Planungsgruppe Landschaft und Raum (planning group for landscape and space) (Stuttgart) and the LOEWENZAHN® consultancy (Berlin, Bleicherode) there arose a highly-qualified team of landscape architects and landscape planners, based on 20 years of experience.

Our ideas for draft plans are defined by holistic approaches to planning. We understand planning as a process and our aim is to lend originality and functionality to the particular location we are dealing with. We are professional service providers, whose primary target is to implement your requirements. Your ideas, paired with our expert advice, guarantee a high level of individuality combined with the best-possible quality.

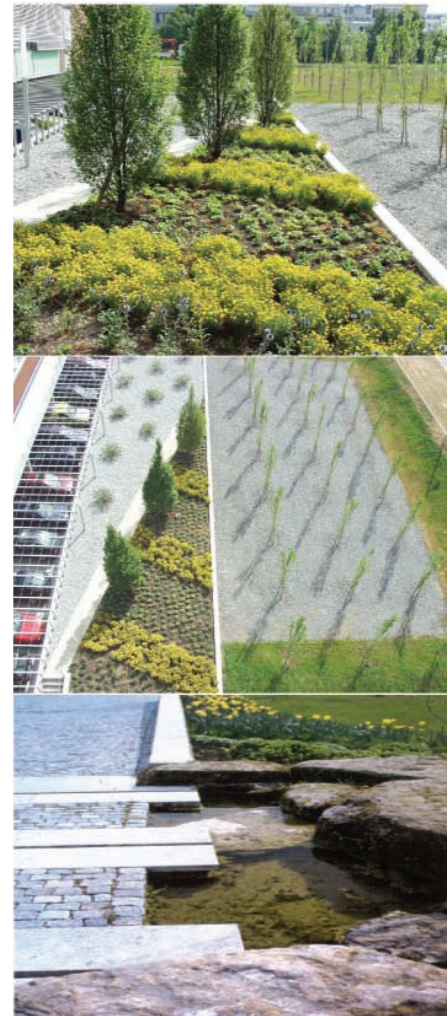

Areas where we are strong include parks and gardens for hospitals and residential and care homes, where we take therapeutic aspects fully into consideration, and also impressive landscapes and gardens with a highly individual character. You too could make an impression with your garden areas and really enhance your image. Discover the power of landscape architecture as a marketing tool.

A further benefit for our customers are our close links with universities. Professor Bott has been teaching at university since 1988 in the higher-level subjects of landscape architecture and town planning. She works actively within research projects and is a juror in many competitions. This means that we are always at the forefront of technology, planning and design.

In addition to references in the form of current and completed projects, we are able to refer to competition successes and various publications. Among others we are currently planning the execution of the gardens of the new HELIOS clinic in Berlin-Buch. The HELIOS clinic is the largest private clinic in Europe and the largest construction site in Berlin in terms of area. The total sum invested in this privately-financed project is 200 million €, of which 8 million € are allocated to the gardens and green areas.

References in Germany (selection):

- Regional model gardens site, Bietigheim-Bissingen (Baden-Württemberg)
- State penitentiary, Dresden (Sachsen)
- Several HELIOS clinics and residential homes (all over Germany)
- Several BfA clinics (all over Germany)
- Vector-Informatik office complex, Stuttgart (Baden-Württemberg)
- GSW residential site, Berlin
- Environment compatibility study for an industrial area of 100 ha (Thüringen)
- Aston Martin Design Center, Draft (Thüringen)
